SAMAY NANDAN

Technical Project Manager | Engineering Lead | Full Stack (Node.js, React, AWS) | Generative AI

Chandigarh, India • +91 98156 91084 • samaynandan@gmail.com • linkedin.com/in/samay-nandan • github.com/Samay-Nandan

PROFESSIONAL SUMMARY

I lead teams that ship. I take client projects from the first requirement to a successful release, keeping the team focused and the client informed. 5+ years in software development and delivery, owning the full SDLC: requirements and BRD/SRS, estimation and proposals, resource planning, sprint execution, scope, risk and change management, client communication and sign-off, for Upwork and direct clients in Australia, the US, Canada, the UK, the UAE and Germany. Hands-on full stack engineer (Node.js, TypeScript, React/Next.js, NestJS, PostgreSQL, AWS) with generative AI features in production and AI-assisted development with Claude Code. Domains: healthcare, travel, gaming, EdTech and SaaS. Seeking Technical Project Manager, Engineering Manager or Delivery Manager roles.

SKILLS

Leadership & Delivery: Engineering Leadership, People Management, Resource Planning & Allocation, Project Management, Technical Project Management, Delivery Management, Engineering Management, Agile/Scrum, Sprint Planning, Requirement Analysis, BRD/SRS & Scope Documents, Estimation & Proposals, Release Management, Scope & Change Management, Risk Management, Stakeholder & Client Management, Upwork Client Management, Mentoring, Code Review, SDLC

Backend & Data: Node.js, NestJS, Express.js, REST APIs, GraphQL, WebSockets (Socket.IO), BullMQ, Redis, PostgreSQL, PostGIS, MongoDB, DynamoDB, Prisma, TypeORM, Caching

Frontend: TypeScript, JavaScript (ES6+), React, Next.js, React Native, Redux, Astro, HTML5, CSS3

Cloud & DevOps: AWS (EC2, ECS, ECR, S3, CloudWatch, Amplify, CloudFormation), Docker, CI/CD, GitHub Actions, Jenkins, Nginx, PM2, Linux, Prometheus, Grafana

Generative AI: AI-Assisted Development (Claude Code), LLM Integration (OpenAI, Perplexity), Prompt Engineering, RAG, AI Agents, Speech AI (AssemblyAI, ElevenLabs), AI Workflow Automation

PROFESSIONAL EXPERIENCE

Eminence Technology – Mohali, Punjab, India

Team Lead – Full Stack | July 2024 – Present

MERN Stack Developer | August 2022 – June 2024

- Lead the engineering team across concurrent client projects: resource allocation, sprint planning, code review and mentoring.
- Own on-time delivery of Upwork and direct client projects end to end: requirement analysis and BRD/SRS and scope documents, estimates and proposals, milestone plans with measurable acceptance criteria, change requests for new scope, and client sign-off.
- Primary point of contact for international clients; report progress, risks and dated next steps, and surface licensing, security and production risks before they become incidents.
- Keep quality high before every release: code review, staging tests and client demos, with deployments on AWS and Linux through Docker, PM2 and CI/CD pipelines.

SmartCaller – Hospital Nurse-call & Alarm Platform, Australian client (smartcaller.com.au)

- Lead delivery of an on-premise nurse-call platform for hospitals and aged care: real-time alarm intake from Ademco/Ampac panels over TCP and serial, escalation of unanswered calls, and output to pagers, LED displays and live dashboards.
- Stack: NestJS, Prisma/PostgreSQL, BullMQ/Redis workers, Socket.IO, Next.js dashboard, React Native app, cloud licensing portal with offline-first sync, Prometheus/Grafana monitoring, and a self-updating Windows installer released through CI.

Group Hotel Booking Platform – Travel, Canada / UAE client

- Delivered the first phase of an AI-assisted group booking tool on Next.js and Node.js, integrating live hotel supplier APIs and the client's Odoo ERP for offers, contracts and vouchers.
- Stabilised production: traced an out-of-memory crash in the hotel content sync, cleared runaway logs and added log rotation, and found supplier code mismatches that were silently dropping suppliers from search.

Restaurant Directory – Geo-search Listings Platform, UK launch

- Led delivery of a Next.js + PostGIS directory served under the client's WordPress domain; replaced Google Places with licence-compliant open data after a terms review, with no change to price or deadline.

AWS Amplify Deployment Investigation – DevOps, client CDK stack

- Diagnosed a deployment that rolled back on every attempt: traced it through CloudFormation events and reproduced it with the Amplify CLI, proving a gap in AWS's documented GitHub token setup; fixed with a fine-grained token and a full evidence report.

PodAgain and TruGamer – AI Podcast Platform (podagain.ai) and Gaming Data Platform (trugamer.com)

- PodAgain: built a generative AI pipeline that turns a podcast archive into new episodes with AssemblyAI transcription, LLM script generation and ElevenLabs voice synthesis.
- TruGamer: built a platform indexing 369,000+ games from the IGDB API with sync and caching, plus an LLM assistant (Perplexity API) that answers player questions from the database.

GeekyBones – Mohali, Punjab, India

Software Engineer | March 2021 – July 2022

- Built Multi-Choice (EdTech records platform: Node.js, Express, PostgreSQL, TypeORM), Goliath (multi-site CMS: Next.js, GraphQL, DynamoDB) and Unova (QR/barcode product tracking).

EDUCATION

Bachelor of Arts – DAV College, Chandigarh, India • 2021 | National Cadet Corps (NCC): 'B' and 'C' Certificates, Alpha Grade
